

patient ID (patient initials and age) E.g Anselmo Antonelli 67 years old = AA67
centre ID (Center initials followed by postal code) E.g. Ospedale San Filippo Neri 67953 = ID SFN67953
Preoperative Data
ASA score (I,II,III,IV)
Preoperative Imaging (CT, Abdominal X-Ray, Abdominal Ultrasound)
Preoperative Blood Exams (Lactates, CRP, WBC)
Clinical Signs (Blumberg+/-)
Time from symptoms to diagnosis (<24hrs, 24-48hrs, >48hrs)
Time from diagnosis to surgery (minutes)
Date of intervention
Intraoperative findings
Cause of bowel obstruction (adhesive bands, volvulus, strangulated inguinal hernia.....)
Length of compromised bowel (centimeters)
Quality of the peritoneal fluid (serous, blood,pus, etc..)
Peristalsis after the resolution of the obstruction after 5-10-15-20 minutes
Return to healty bowel coloration after the resolution of the obstuction after 5-10-15-20 minutes
ICG-fluorescence angiographic and uploading of a photo or breif video (follow the indications in Table 1) Naming the file as center ID followed by a dash and patient ID. E.g. SGB6754-GC65 The file could be send in the Telegram Group alternatively.
Number of iv ICG

PLEASE NOTE. Despite the repeatability of IV boluses, it is still recommended not to exceed the maximum dose recommended in the product leaflet
Bowel resection (YES/NO) If YES , which tract and how much centimeters ?
Surgical procedure (adhesiolysis, inguinal hernia repair,volvulus derotation, etc...)
Associated surgical procedures
Conversion (YES/NO) If YES, specify the reason
Post-operative Data
Reintervention (YES/NO)
Date of reintervention
Delayed resection of the compromised bowel
Blood Exams on the day of reintervention (Lactates,CRP, WBC)
Death (YES/NO)
If YES , specify the post-operative date
Length of stay (days)
